SIGHTLINE

LOGIC PUZZLE

Every clue has a point of view.

across the whole board?

Sightline is a fresh deduction game with the pick-up-and-play simplicity of the best puzzle games. Every clue tells you how many bombs it can see in a direction. Follow the sightlines, piece together what the board is telling you, and find every safe tile.

NO GUESSING. NO LUCK. JUST ONE MORE LEVEL.

GAMEPLAY TRAILER · 48 SECONDS

700 LEVELS · 16-PLAYER MULTIPLAYER ON EVERY DEVICE · CROSS-PLATFORM PLAY · DAILY PUZZLE · GLOBAL LEADERBOARDS · PC + MOBILE

PLAY IT

Play the build.

▼ BUILD NOTES

PLAYABLE BUILD

Standalone, no store client: macOS (notarized) and Windows (unsigned: on first open choose More info, then Run anyway). Opens straight into the game; no intro to skip. Windowed or fullscreen; mouse, keyboard and controller. Controls listed in Settings.

STORE BUILDS

Prefer to play through a store? Steam keys, TestFlight (iPhone and iPad) and Google Play test invites are available on request: email Yumloop.

CHECKPOINTS

Settings → *Explore mechanics* jumps to the level that introduces each mechanic (Walls, Channels, Purple tiles, Mirrors, One-way arrows, Portals) or to any of the 400 levels. *Grand Levels* on the menu opens the second campaign of 300 large boards.

MULTIPLAYER

Menu → *Multiplayer*. Join a quick match, or create a room and share its five-letter code to play together. You appear as “Guest”; matches are live and cross-platform, so you may meet players on iPhone, iPad, Android, PC, Mac and Steam Deck. To try it with a colleague, one creates a room and the other joins with its code, on Windows or Mac.

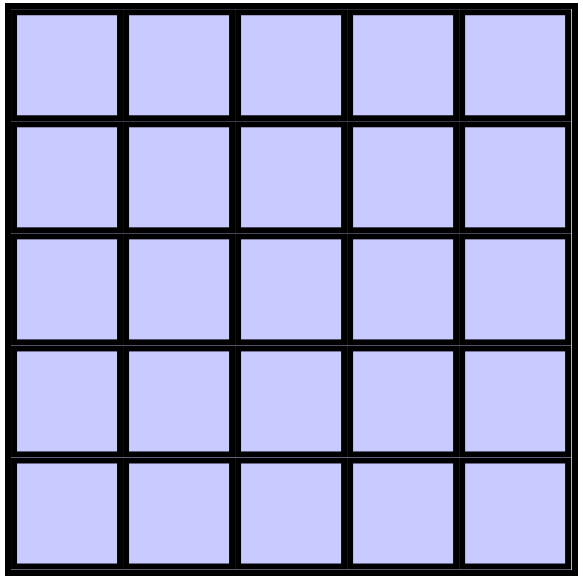

VIDEO

The 48-second trailer above doubles as a playthrough of the mechanics, and every clip on this page is captured from the real game.

BUDGET

Development to a releasable PC 1.0 is substantially complete and self-funded.

One rule. Read it in seconds.

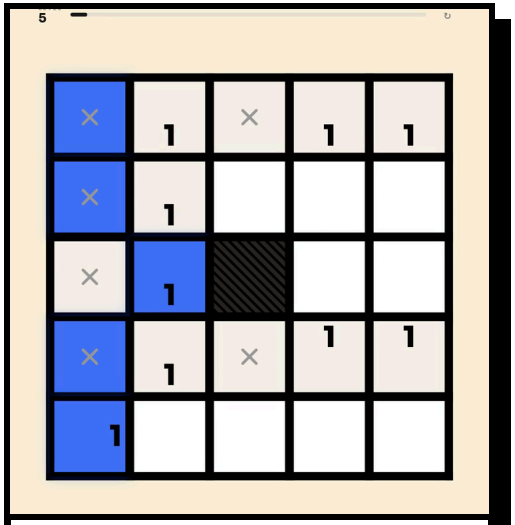

Built to scratch that same “I’ll just do one” itch as Sudoku, Minesweeper and the best modern daily puzzle games. Except you’ll probably do five.

The board above is the final state of a four-step example: a revealed tile shows edge numbers; a number counts the bombs visible along its line; a second tile that sees nothing rules out its whole row, which pins the bomb; every safe tile is revealed.

ONE RULE, INCREASING DEPTH

Then Sightline starts messing with you.

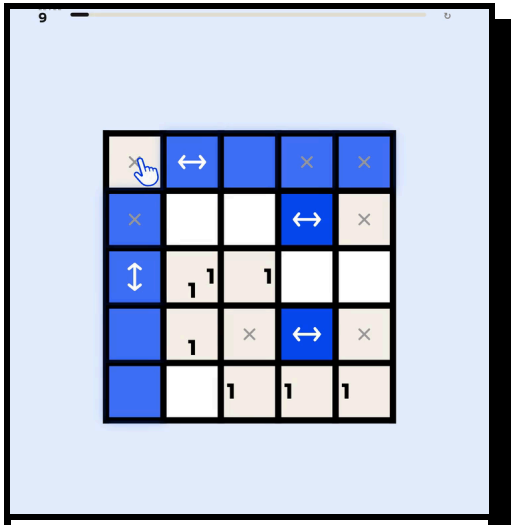

Walls block your view. Channels carry it. Mirrors bend it. One-way arrows change the rules. Portals send it somewhere else entirely. One simple idea keeps twisting into something new.

LEVEL 5

Walls

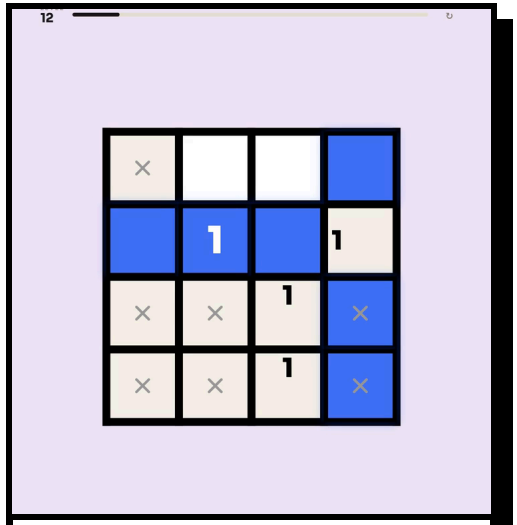

Sightlines stop dead at a wall and cannot see past it.

LEVEL 9

Channels

A window: sight passes through the way its arrows

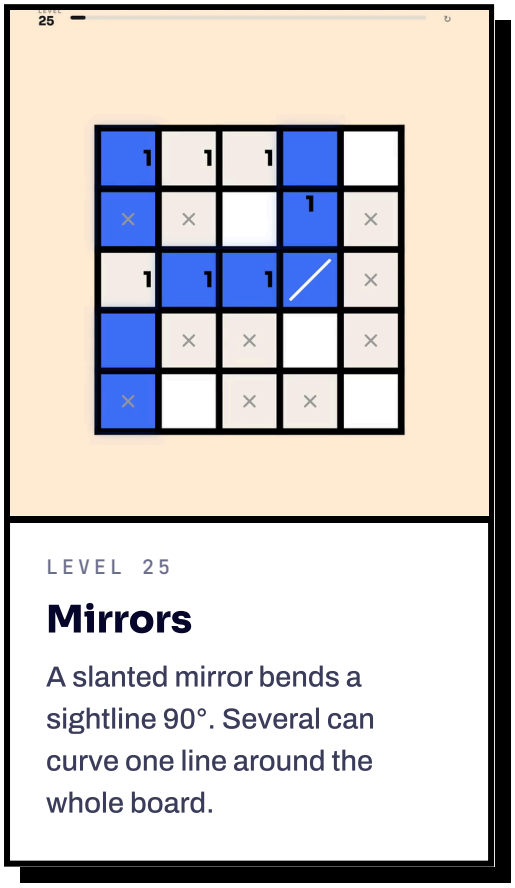

LEVEL 12

Purple tiles

Count the bombs in the eight tiles around them and ignore

point, and is blocked across them.

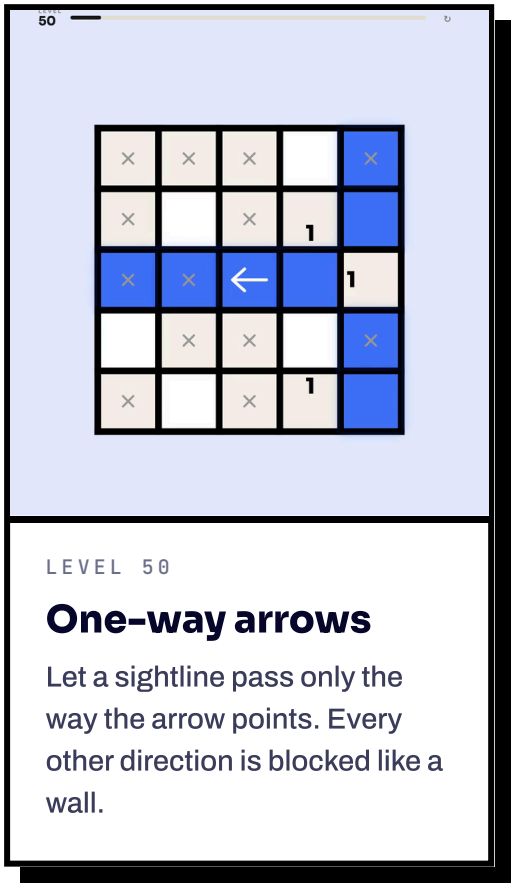

sightlines entirely.

LEVEL 25

Mirrors

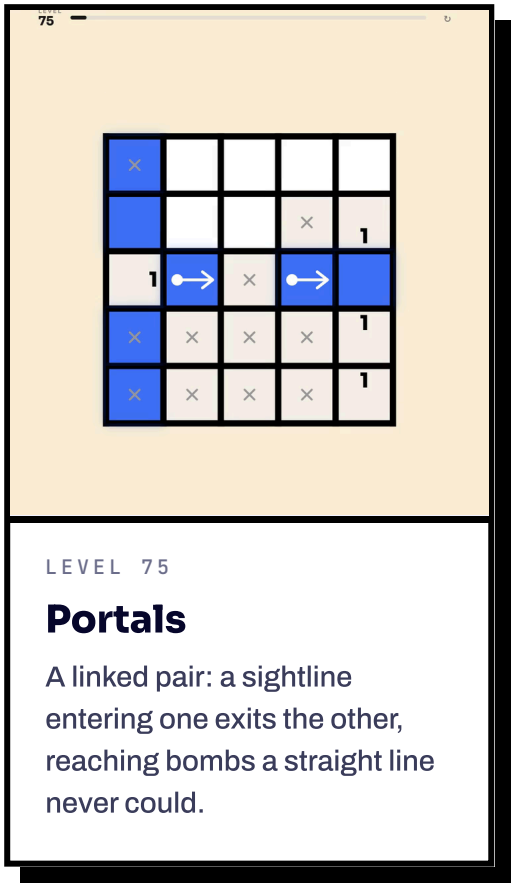

A slanted mirror bends a sightline 90°. Several can curve one line around the whole board.

LEVEL 50

One-way arrows

Let a sightline pass only the way the arrow points. Every other direction is blocked like a wall.

LEVEL 75

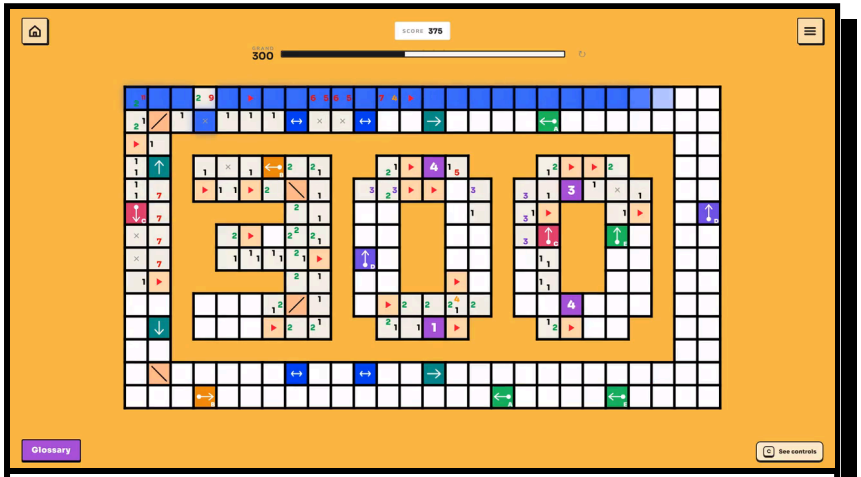

Portals

A linked pair: a sightline entering one exits the other, reaching bombs a straight line never could.

The language stays simple. The deductions don't.

Every puzzle remains logically solvable. All 700 are verified by the solver before they ship, and so is every multiplayer board.

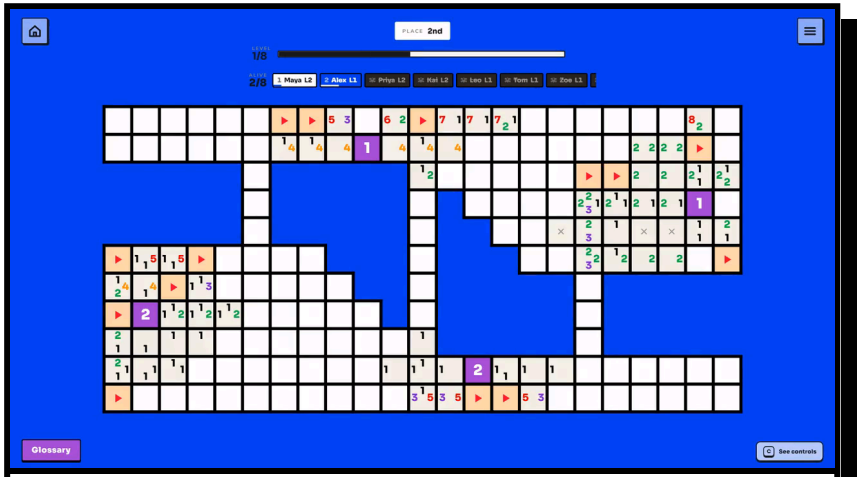

BIGGER BOARDS. MORE PLAYERS.

300 LEVELS · IPAD, PC, MAC, STEAM DECK

Grand Levels

A second campaign of large boards drawn as pictures (mazes, castles, islands, constellations), made for larger screens: iPad, PC, Mac and Steam Deck, and console in future.

2 TO 16 PLAYERS · EVERY DEVICE

Elimination

Everyone plays the same boards at once. One mistake and you're out; last one standing wins. On every device, phones included, all in the same matches.

It started with one question.

What if a Minesweeper-style clue didn't tell you what was immediately around it, but instead told you what it could *see*?

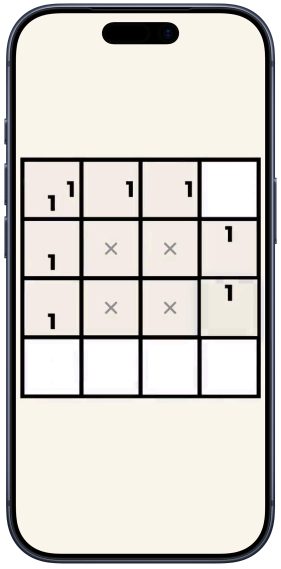

The result was a visual rule that takes seconds to understand but opens a surprisingly large space for unique gameplay.

I love games where complexity emerges from a small number of consistent rules rather than continually adding exceptions, and Sightline grew naturally from that idea.

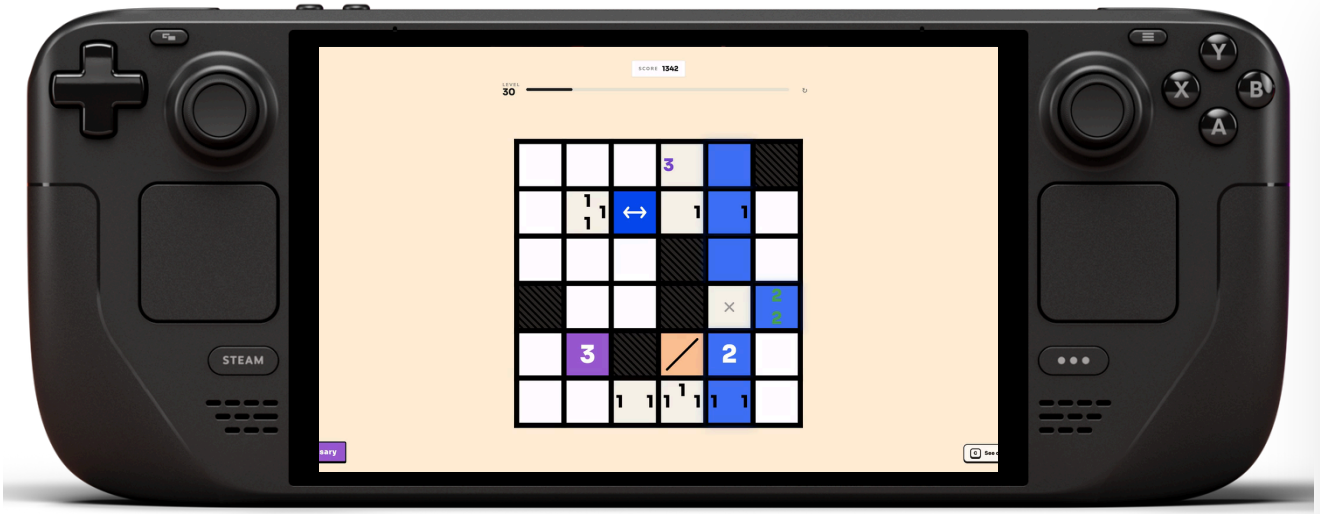

— YONI, DESIGNER

THE PRODUCT

One game. Every screen. One save.

IPHONE · IPAD · ANDROID

STEAM DECK · STEAM · WINDOWS · MACOS

SWITCH · MOCK-UP

IOS	ANDROID	STEAM	MACOS	STEAM DECK	CONSOLE · POTENTIAL

700 levels

400 main levels across eight board shapes, introducing each

Multiplayer: Elimination

On every device, phones included. Up to 16 players on

Cross-platform play

iPhone, iPad, Android, PC, Mac and Steam Deck players share

Daily puzzle

The same board for everyone that day, with streaks.

mechanic in its own moment, plus 300 Grand Levels: large boards drawn as pictures, made for larger screens (iPad, PC, Mac and Steam Deck, and console in future).

the same boards at once. One mistake and you're out; last one standing wins. Quick match or private rooms with five-letter codes, plus Grand matches on the large boards for Steam and iPad players.

the same matches and rooms, with invites from Steam, Game Center and Play Games friends.

Global leaderboards

Daily, time challenge and campaign boards across every platform.

Cross-save

Saves sync automatically through the player's own platform account (Game Center, Google Play Games or Steam) on every device signed in to it.

Cross-device progression

A one-time link code joins different ecosystems (say an Android phone and a Steam Deck); from then on one save follows the player everywhere.

Online systems

Friends, friend codes, shared Daily results.

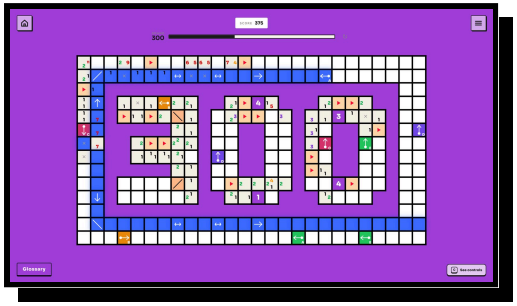

Large content pool

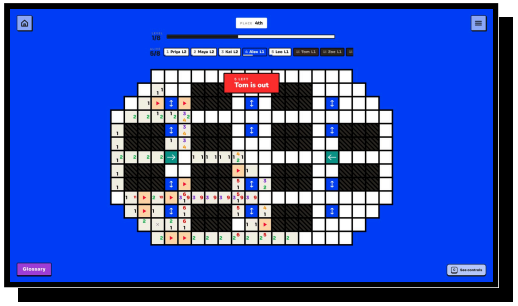

Campaign, Daily, Time Challenge, a glossary that fills in as mechanics are met.

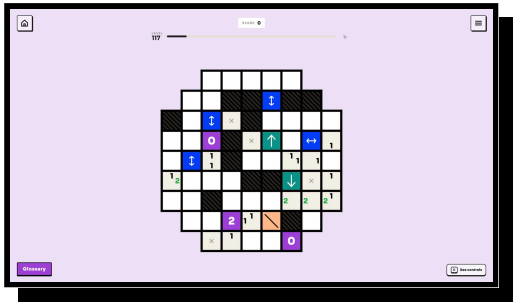

Platform-native input

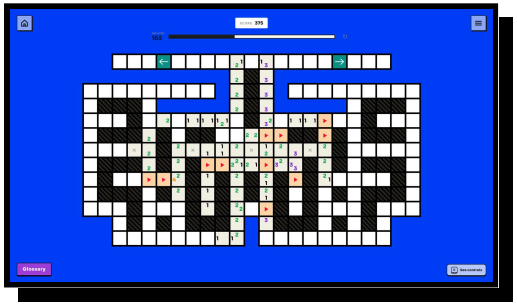

Touch, mouse, keyboard, controller, Deck gyro; colour-blind palettes; reduced motion.

DEVELOPMENT STATUS

Built. Tested. Not yet launched.

Sightline's core development has been self-funded and is substantially complete. It is currently in final polish, platform preparation and release preparation.

Sightline has undergone extensive testing across macOS, Steam, Steam Deck, iOS and Android, including:

- [x] Core gameplay
- [x] Saving
- [x] Cross-save
- [x] Online functionality
- [x] Progression
- [x] Cross-device progression
- [x] Global leaderboards
- [x] Platform-specific UI and input

Sightline is substantially complete, cross-platform and extensively tested — but its public marketing launch is still ahead of it.

The store pages, builds, achievements and trailer exist today. What hasn't happened yet is the part a partner changes most.

TECHNICAL

One codebase. Native on every platform.

Developed solo by Yumloop. The game is a single hand-written web codebase with no engine or framework, shipped byte-identical inside thin native shells on each platform.

CORE TECHNOLOGY

HTML5 · JavaScript · CSS

No game engine. One shared codebase for every platform; current build v0.10.409.

MOBILE

Capacitor 6

iOS 15+ (Capacitor iOS 6.2.1) and Android 5.1+ (Capacitor Android 6.2.2). Native Swift and Java plugins for Game Center, StoreKit 2, CloudKit, Google Play Games Services and Play Billing.

DESKTOP

Electron 44

Packaged with electron-builder 26. Steamworks via steamworks.js 0.4: achievements, leaderboards, Steam Cloud, Steam Input, rich presence. macOS notarized; Windows build runs on Steam Deck under Proton.

SOURCE CONTROL

Git · GitHub

Private repository, single trunk, every release tagged. iOS built by Xcode Cloud; Steam uploads via SteamPipe; Android via the Play Developer API.

ONLINE

Cloudflare Workers + D1

Small account service: silent sign-in through the platform's own identity (Game Center, Google Play Games, Steam), progress-never-decreases cloud sync, one-time link codes across ecosystems, in-app account deletion. Real-time multiplayer on Durable Objects (hibernating WebSockets): the server holds the boards and checks every move. Analytics via TelemetryDeck.

PLATFORMS & KEY SYSTEMS

iOS · Android · macOS · Windows · Steam · Steam Deck

Cross-platform multiplayer · Cross-save · Cross-device progression · Global leaderboards · Achievements · Daily puzzles. Tested on iOS, Android, macOS, Steam and Steam Deck.

THE LAUNCH OPPORTUNITY

The game exists. The audience is still to be built.

Sightline has not yet had a meaningful public marketing campaign, and it does not yet have an established audience.

This leaves its reveal, audience-building campaign, creator outreach, press strategy and broader launch opportunity largely untouched.

PRODUCT MATURITY

High

MARKETING RUNWAY

High

Yumloop.

THE COMPANY

Yumloop is a new independent games company founded by Yoni, a former designer at Rockstar North. Sightline is Yumloop's first release.

Yumloop is being built as a long-term independent games company focused on original games with strong, immediately understandable mechanical identities.

YONI · FOUNDER / DESIGNER

Former designer at Rockstar North, with credits on Grand Theft Auto V, Red Dead Redemption 2 and Grand Theft Auto VI. Based in Scotland.

Created Sightline independently and brought it across every platform above.

A strong first release. A studio built to last.

IMMEDIATELY

Give Sightline the strongest possible launch across mobile and PC, establish its first meaningful audience, and explore the right console opportunities.

LONGER TERM

Establish Sightline as Yumloop’s first successful release and build Yumloop into a sustainable independent studio capable of continuing to create and release original games.

I’m looking for a partner who can make the opportunity bigger.

This isn’t a prototype. What I’m looking for isn’t someone to fund one. It’s the right partner to turn a finished, polished puzzle game into a much bigger launch.

I’m looking for a publishing partner who can materially increase Sightline’s potential through:

LAUNCH STRATEGY	MARKETING	USER ACQUISITION
PLATFORM RELATIONSHIPS	PR & CREATORS	LOCALIZATION
RELEASE SUPPORT & QA	CONSOLE STRATEGY & PORTING	THE RIGHT ANNOUNCEMENT

I’m looking for a partner whose involvement can meaningfully change its trajectory.

Ready to move quickly.

Target launch: Q4 2026 — flexible with publishing strategy.

Sightline's advanced development state means it can move toward release quickly.

The final launch date has not been publicly committed and remains flexible enough to accommodate the right announcement, marketing and platform strategy with a publishing partner.

Why I’m writing to you.

I’m approaching publishers with a track record of bringing mechanically distinctive independent games to market, and treating a clear idea as the asset rather than the scope.

Sightline isn’t a game whose value comes from enormous production scope. Its strength is a simple central idea that creates significantly more depth than it initially appears to.

I’m looking for a partner that sees that simplicity as a strength and can help communicate it to a much larger audience.

THE PARTNERSHIP

Sightline first. Yumloop alongside.

I’m seeking a publishing partnership around Sightline while building Yumloop as an independent long-term games company.

I’m very open to building an ongoing relationship with the right publishing partner where it makes sense.

SIGHTLINE

LOGIC PUZZLE

Every clue has a point of view.

Sightline is substantially complete and available to play now. I'd love to hear what you think.
